

Women Safety in India

Case Studies & Data

Supporting Reference for Hackathon Problem Statement

Innovate 4 Impact: AI SDG Global Hackathon 2026

Theme: Women's Safety & Empowerment

1. The Numbers Tell a Serious Story

- In 2022, over 4.45 lakh (445,256) cases of crimes against women were registered across India — that works out to nearly 51 police complaints every single hour.
- The national crime rate against women stood at about 66 cases per lakh women in 2022, but in cities like Delhi it was more than double that, at over 144 per lakh.
- Delhi alone recorded over 14,000 cases of crimes against women in a single year, including thousands of kidnapping and abduction cases.
- Domestic violence remains the single largest category, with cruelty by husband or relatives accounting for the majority of reported cases.

SIMPLE WAY TO EXPLAIN THIS ON STAGE

"Every hour, somewhere in India, more than 50 women file a complaint about a crime against them. Many more never report at all."

2. The Hidden Problem — Underreporting

- A large share of harassment incidents never get reported at all, meaning official government data only shows part of the real picture.
- A national health survey found that around 32% of ever-married women in India have faced physical, sexual, or emotional violence from their husbands at some point in their life — a number far higher than what crime records alone show.

WHY THIS MATTERS FOR YOUR APP

Many women don't report incidents because it takes too much effort, time, or courage in the moment. A one-tap SOS button removes that barrier — no need to explain anything, just tap and help is on the way.

3. City & State Patterns

Useful for localizing your pitch to judges:

- Uttar Pradesh, Maharashtra, Rajasthan, West Bengal, and Madhya Pradesh together account for around half of all cases registered nationally.
- Maharashtra — your home state — is consistently among the top 5 states by number of cases, making a locally-built safety tool directly relevant.

4. Why Technology-Based Solutions Are Gaining Attention

- Government bodies have responded with One Stop Centres, women's helpdesks, digital complaint systems, and expanded helplines, alongside growing focus on cyber-enabled crimes.
- Recent surveys highlight that women's perception of safety — how safe they feel — matters just as much as official crime statistics, since it affects whether they even step out or seek help.

THIS SUPPORTS YOUR PITCH

A simple, always-available personal safety tool addresses the feeling of safety directly, not just after-the-fact reporting.

5. Well-Known Real-World Catalysts

These are widely known public events that shaped India's conversation on women's safety and safety-tech (context, not statistics):

- The 2012 Delhi gang-rape case led to major legal reforms (stricter laws, fast-track courts) and sparked the first wave of women's safety mobile apps in India.
- Since then, several state governments (e.g., Delhi's Himmat app, various state police SOS apps) have launched official safety apps — showing there is real institutional appetite for exactly this kind of solution.

TALKING POINT

"Our app builds on the same idea that government safety apps use, but keeps it simple, free, and instantly accessible without needing to download anything."

6. Suggested One-Liner for Your Pitch

"In India, a crime against a woman is reported every few minutes, and countless more go unreported. Our app can't solve everything — but it can make sure that in the critical seconds of an emergency, help is just one tap away."
